RAPID APPLICATION DEVELOPMENT (RAD)

Project Title: NoBuy – Smart Shopping Application

---

1. INTRODUCTION

The **NoBuy App** is a mobile-based e-commerce application designed to help users browse, search, and purchase electronic products such as phones, laptops, headphones, and smartwatches. The application focuses on a simple and visually appealing interface with quick navigation and product accessibility.

2. OBJECTIVE

- To develop a user-friendly shopping application
- To provide categorized product browsing
- To enable quick product search and selection
- To allow users to view product details and add items to cart

3. PROJECT SCOPE

The application includes:

- Product categories (Phones, Laptops, Headphones, Watches)
- Search functionality with voice input option
- Product listing page
- Product detail view (price, specs, offers)
- Add to cart feature
- Basic navigation bar

Future scope:

- Payment gateway integration
- Order tracking
- User login & personalization
- AI-based recommendations

4. RAD METHODOLOGY PHASES

4.1 Requirements Planning

- Identify user needs: easy browsing, quick search, simple UI
- Define core features: categories, product display, cart system
- Decide platform: Mobile application

4.2 User Design

UI Screens Designed:

1. **Home Screen**
    - App logo (NoBuy)
    - Search bar with voice input
    - Delivery location field
    - Category section (Phones, Laptop, Headphone, Watch)
2. **Category Page (Phones)**
    - List of phones (Samsung, iPhone, OnePlus, etc.)
    - Product images with names and storage details
3. **Product Detail Page**
    - Product image (large view)

    - Specifications (color, size)
    - Price & discount info
    - Offers (free delivery, prime benefits)
    - “Add to Cart” button

4.3 Construction Phase

- UI developed using mobile app framework (e.g., Flutter / React Native)
- Static product data used for prototype
- Navigation between screens implemented
- Basic interaction features added

4.4 Cutover Phase

- Testing of navigation and UI responsiveness
- Bug fixing (if any UI misalignment or navigation issues)
- Final prototype ready for demonstration

5. SYSTEM FEATURES

5.1 Search Functionality

- Text-based search
- Voice search icon included

5.2 Product Categories

- Phones
- Laptops
- Headphones
- Watches

5.3 Product Listing

- Image display
- Product name and storage details

5.4 Product Details

- Color and size
- Price with discount
- Delivery offers

5.5 Cart Feature

- Add to cart button for purchasing

6. ADVANTAGES

- Simple and attractive UI
- Easy navigation
- Quick product browsing
- Beginner-friendly design

7. LIMITATIONS

- No real-time payment system

- No backend/database integration
- Static product data
- No user authentication

8. FUTURE ENHANCEMENTS

- Integration with payment gateways (UPI, cards)
- AI-based recommendations
- Wishlist feature
- Order history tracking
- Real-time product updates

9. CONCLUSION

The **NoBuy App** demonstrates a basic yet effective implementation of an e-commerce platform using the RAD approach. The prototype successfully showcases core shopping functionalities such as browsing, searching, and adding products to the cart, making it a strong foundation for future development.
