Comparison of user designs.

Example of bad design:

Example of good design:

SWEET WHISK

Blissful Blueberry

Freshly baked, bursting with real blueberries in every bite.
Soft, fluffy cupcakes that melt in your mouth.
Made with love, quality ingredients, and bakery-fresh goodness.
One bite is all it takes to fall in love with blueberry.

You can also dream for:

Choco caramel

Blissful Blueberry

Red dream

Berrylicious Cupcake Dreams

SWEET WHISK

Red Dream

One bite is all it takes to fall in love with red velvet.
A single cupcake that turns cravings into obsession.
One cupcake, endless reasons to come back for more.
Because some classics deserve to be tasted, not just admired.

You can also dream for:

Blissful blueberry

Red Dream

Choco caramel

Berrylicious Cupcake Dreams

BAD WEBSITE: *Sweet Whisk (Initial Design)*

Design Style: The initial Sweet Whisk design follows a very simple and minimal layout. The interface uses solid background colours for each cupcake section and places the products in a basic card-style format. While the design looks clean, it lacks creativity, visual depth, and aesthetic appeal. There are very few decorative elements, making the overall design feel plain and less engaging to users.

Content: The website displays cupcake varieties such as *Black Thunder*, *Magic Mint*, and *Better Butter* along with their images. Each cupcake has a “View More” option, but there is no additional information provided about the flavour, ingredients, or uniqueness of the product. The content is minimal and does not create excitement or interest among users.

Navigation: The initial design does not include a proper navigation menu. Users do not have clear options to explore other sections of the website. This makes navigation limited and reduces the overall usability of the interface.

Purpose: The main purpose of this design is to display products in a simple manner. It is suitable only for basic product browsing and does not focus on branding, user engagement, or interaction.

GOOD WEBSITE: *Sweet Whisk (Improved Design)*

Design Style: The improved Sweet Whisk design is visually attractive and well-structured. It uses themed colour combinations, curved shapes, gradients, and decorative elements to enhance the overall appearance. Each cupcake flavour is presented with matching visuals, making the interface livelier and more appealing. The design feels modern and professionally crafted.

Content: This version includes detailed descriptive text that explains the taste, quality, and uniqueness of each cupcake. Emotional and engaging language is used to attract customers. Promotional elements such as special offers and highlights are added, making the website more appealing and encouraging users to explore further. Supporting images like fruits and chocolates strengthen the connection between the product and its flavour.

Navigation: A clear and user-friendly navigation bar is provided with options such as Home, About, Pricing, and Contact. This allows users to easily move between different sections of the website, improving accessibility and overall user experience.

Purpose: The improved design focuses on branding and customer engagement. It aims to create an emotional connection with users, promote products effectively, and encourage interaction, making it suitable for a modern cupcake or bakery website.

KEY DIFFERENCES

- The initial website mainly focuses on displaying products, whereas the improved website emphasizes branding and storytelling.
- The initial design uses a simple and flat layout, while the improved design is visually rich and attractive.
- Content in the initial website is minimal, whereas the improved website provides detailed descriptions and promotional elements.
- Navigation and usability are significantly better in the improved website.
