Design input forms that validate data (e.g., email, phone number) and display error messages using HTML/CSS, JavaScript (with Validator.js)

AIM:

The aim is to design input forms that validate data, such as email and phone number, and display error messages using HTML/CSS and JavaScript with Validator.js.

PROCEDURE:

Step 1: Setting Up the HTML Form

Start by creating an HTML form with input fields for the email and phone number.

html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Form Validation</title>
  <link rel="stylesheet" href="style.css">
</head>
<body>
  <div class="container">
    <form id="myForm">
      <label for="email">Email:</label>
```

```

<input type="email" id="email" name="email" required>
<span id="emailError" class="error"></span>

<label for="phone">Phone Number:</label>
<input type="text" id="phone" name="phone" required>
<span id="phoneError" class="error"></span>

<button type="submit">Submit</button>
</form>
</div>
<script
src="https://cdnjs.cloudflare.com/ajax/libs/validator/13.6.0/validator.min.js"></script>
<script src="script.js"></script>
</body>
</html>

```

Step 2: Styling the Form with CSS

Next, add some basic styling to make the form look nice.

css

```

❏ /* style.css */ body { fontfamily:
Arial, sans-serif; background-color:
#f4f4f4; display: flex; justify-content:
center; align-items: center;
height: 100vh; margin: 0;
}
.container { background-color: white; padding:
20px; border-radius: 5px; boxshadow: 0 0 10px
rgba(0, 0, 0, 0.1);

```

```
}
```

```
form { display: flex; flex-  
  direction:  
  column;  
}
```

```
label { margin-  
  bottom: 5px;  
}
```

```
input {  
  margin-bottom: 10px;  
  padding: 10px; border: 1px  
  solid #ccc; border-radius:  
  3px;  
}
```

```
button { padding:  
  10px; background-color: #28a745;  
  color:  
  white; border: none; border-radius:  
  3px; cursor:  
  pointer;  
}
```

```
button:hover {  
  background-color: #218838;  
}
```

```
.error { color: red; font-size:
    0.875em;
}
```

Step 3: Adding JavaScript for Validation

Finally, add JavaScript to validate the input fields using Validator.js and display error messages.

javascript

```
□/*  script.js      */ document.getElementById('myForm').addEventListener('submit',
function (e) { e.preventDefault();
```

```
    let email = document.getElementById('email').value; let
    phone = document.getElementById('phone').value; let
    emailError = document.getElementById('emailError'); let
    phoneError = document.getElementById('phoneError');
    // Clear previous error messages emailError.textContent
    = ""; phoneError.textContent = "";

    //  Validate      email if      (!validator.isEmail(email)) { emailError.textContent =
    'Please enter a valid email address.';
    }
    //  Validate  phone  number  if  (!validator.isMobilePhone(phone,
    'any')) { phoneError.textContent = 'Please enter a valid phone
    number.';
    }
```

```
// If no errors, submit the form (for demonstration purposes, we'll just log the values)
if (validator.isEmail(email) && validator.isMobilePhone(phone, 'any')) {
  console.log('Email:', email); console.log('Phone:', phone); }
});
```

□

OUTPUT:

A screenshot of a form with two input fields. The first field is labeled 'Email:' and contains the text 'ajay@gmail.com'. The second field is labeled 'Phone Number:' and contains the text '123'. Below the phone number field, there is a red error message that reads 'Please enter a valid phone number.' At the bottom of the form is a green 'Submit' button.

A screenshot of a form with two input fields. The first field is labeled 'Email:' and contains the text 'abc123'. Below the email field, there is a red error message that reads 'Please enter a valid email address.' The second field is labeled 'Phone Number:' and contains the text '9876543210'. At the bottom of the form is a green 'Submit' button.
